

PRESS RELEASE

Manufacturer Announces Relocation & Groundbreaking Ceremony

For immediate release: November 13, 2015, Lewisburg, PA

Timberhaven Log & Timber Homes, LLC, a nationally-recognized log home manufacturer, announced that it is relocating its manufacturing facilities and corporate headquarters from Lewisburg to Middleburg, PA. The company plans to establish its new home in the pre-existing Penn Truss Systems building (originally Glencoe, Inc.) at 1081 Salem Church Road in Snyder County. The 27,000 sq. ft. building on 22 acres of commercial property will encompass the company's extensive manufacturing equipment and office space for its 16 employees.

Utilizing T-Ross Brothers' services, Timberhaven's current manufacturing equipment will be relocated to the new building. This equipment includes:

- A massive planer, weighing between 6-8 tons, includes 200 ft. of dust collection pipes, a 30 ft. cyclone, and a 10x20 bag house. The power of 2 large loaders will be needed to lift the planer. Lumber lines and unstacker equipment will also be disassembled and relocated. The planer and related equipment will fill 4 -6 tractor trailer trucks and will take 2 weeks to disassemble, relocate and reassemble.
- The Radio-Frequency Machine (laminator) will require specialty technicians to unhook hundreds of sensor wires (the "brains" of the machine). This machine will fill 2-3 tractor trailer trucks and will take approximately 2 weeks to move.
- The house cutline includes 10 pieces of equipment and is 175 ft. long. It has a 200 ft. dust collection system and a 20 ft. tall cyclone. It is expected this cutline will fill 2 tractor trailer trucks and take 2 weeks to move.
- The roof cutline includes 3 saws and is 30 ft. long. It is expected the roof cutline will fill 1 tractor trailer truck and will take 1 week to move.
- The bridge cutline includes 6 pieces of equipment, an air compressor, and another 250 ft. of dust collection pipe. It totals 200 ft. in length. It is expected that the bridge cutline will fill 1-2 tractor trailer trucks and take 1 week to relocate.

Your Dream ... Our Passion

In addition to the 10-13 truckloads of manufacturing equipment, the company will relocate approximately 45 truckloads of inventory consisting of logs, timbers and other related building materials. The process of relocating equipment and inventory of such magnitude will be coordinated in 4 different phases and is expected to take approximately 4-6 weeks to complete. The move is tentatively scheduled to be executed before the year's end.

In addition to the relocation itself, renovations are being implemented to prepare the Middleburg building for Timberhaven's everyday business requirements. Walls and doors have been relocated and enlarged, a new wood boiler is being installed, a special boiler room constructed, a sawdust and wood shaving blower system established, a blueprint plotter room is being built, and existing office space has been updated to accommodate advanced technologies.

The most significant enhancement is the 16,800 sq. ft. steel addition that will be constructed to the east side of the existing structure. The external space will serve as storage for the company's specialty logs and timbers and as a staging area as log home package components are organized prior to delivery.

In order to commemorate the company's relocation and steel addition, an official groundbreaking ceremony will take place on Friday, November 20th at 2 p.m. Owners and employees of Timberhaven Log & Timber Homes, T-Ross Brothers Construction representatives, Snyder County Commissioners, State Representative Fred Keller and other area leaders will be in attendance. Please join us.
